

Delivery Plus Privacy Policy

The Delivery Plus App owner is Target Data Systems Inc.

This Delivery Plus App collects three types of data, User-Attached Photo, User-Recorded Audio, and User-Typed Text.

User-Attached Photo

This Delivery Plus App uses access to the device's camera so that a User may take a photograph and attach it to an e-mail. The purpose of this photograph is to provide more detail to the User and whomever the User e-mails about the product they are Delivering. Photographs are not saved and will be discarded as soon as the e-mail is sent or the delivery is completed. During installation, a User must agree to give Delivery Plus permission to access to the device's camera for this type of data to be collected. Otherwise, it will not be collected.

User-Recorded Audio

This Delivery Plus App uses access to the device's audio recording so that a User may speak delivery information into the App rather than type it. The purpose of this audio is to provide an easier hands-free delivery for the User. Recorded Audio is not saved and will be discarded as soon the delivery is processed. During installation, a User must agree to give Delivery Plus permission to the Record Audio for this type of data to be collected. Otherwise, it will not be collected.

User-Typed Data

This Delivery Plus App keeps a log of a User's ongoing transactions within the app . The purpose of this data is to provide a record User to view and use. The User-Typed data may be collected by onscreen keyboard, attached hardware keyboard, or barcode keyboard.

No third parties have access to any data collected other than the User, the User's operating Company, or Target Data Systems Inc.

Users have full rights over their data, they may keep it saved, modify it, or delete it.

When updates are made to the app or privacy policy, a Google Play Store update will notify the user of a new version and ask permission to make changes to the program or privacy policy.

This Privacy Policy is Effective October 9, 2017.
